All our radiators have been designed to provide a comfortable level of warmth needed for everyday indoor use, as well as being manufactured to conform to BS EN 442-1:2014, and all current

Our heating products have all been independently tested and we are delighted to present our collection of fully certified CE products that conform to all applicable standardized regulations.

#### DESIGNER RADIATOR AND HEATED TOWEL RAIL FAQS

#### How much heat will I need?

All rooms are individual and therefore the heat output required from your selected radiator will vary. It is important that you choose the correct radiator to ensure that enough heat is generated to keep you comfortable. A sensible tip is to always choose a model with a higher heat output than you require, as this can always be controlled by turning them

#### What is the measurement for heat output?

All our radiators carry the heat output measured in either:

- BTUs (British Thermal Unit) or

Our BTU heat output is calculated at Delta T50K. max. working temperature of 90°C.

#### What heat output will I need for my room?

It is highly recommended that your installer calculates the BTU requirement for each applicable room, so you can get the maximum heat benefit from your chosen radiator. We strongly suggest this is done before purchasing your radiator.

#### What radiator designs offer the best heat output?

Basically, the bigger surface area that a radiator has, the more heat output will be generated. Another general guide is that painted finishes offer a slightly better heat output than chrome-finished items. To optimize the space you have available, we offer radiator designs that can be fitted horizontally or vertically. To get additional heat output from the same area, you can also choose options that include multi rows of tubes, panels and columns.

#### Radiator colour options

From stock, we offer the most current fashionable colour options across a wide range of products.

Please note that owing to the printing process, the actual colours on the radiators may vary slightly from those shown in our brochure.

#### Pine centres

All our dimensional details are published in our current brochure and on our website. However, owing to manufacturing tolerances, we strongly suggest that your final pipework position is not completed until you actually receive delivery of your radiator.

#### Electric-only radiators

Where your installation location does not have immediate access to an existing water supply, we can offer purposemade electric-only products for a quick and easy solution to your heating needs. These electric-only products are supplied pre-filled with an electrical inhibitor solution, and fitted with a compatible heating element.

#### **Dual-fuel radiators**

Some of our radiators can also work as dual-fuel applications, which means that when your main heating system might be turned off in the summer months, you can still operate your radiators electrically if required. Please consult your plumber before purchasing heating elements.

#### Radiator valves options

Depending on your choice of radiator, we have several styles to choose from, details of which can be found on the left hand page

#### Warning / Precautions

Qualified persons should make all electrical and plumbing connections. When fitting radiators with heating elements, the radiator must always be mounted with the element at the bottom with the radiator in the upright position. Failure to do so may result in a fire hazard.
