Heating

By Style

248 / Square

253 / Rounded

262 / Heated Towel Rails

266 / Ladder Rails

270 / Valves

There are vertical radiators for when space is at a premium, horizontal designs that are perfect for under windows, and an exciting choice of colours and finishes for the ultimate in co-ordination.

As well as outstanding design, many of our radiators provide exceptional heat output so you can turn up the heat and the style. Even the smallest details can create a big impact. Our range of robe and radiator hooks are designed to provide practicality and offer the perfect finishing touch. And there's something else that you'll warm to. Our heating collection comes with reassuring market leading guarantees.

THE *Essentials*

These key features are highlighted on each product page, where applicable:

Exceptional Heat Output
The radiator gives exceptional heat output for its surface area. Applies to radiators with a heat output in excess of 4000 BTUs

Compact
Ideal for rooms where space is at a premium, these compact designs have central inlets which save valuable wall space.

Colour OPTIONS

Optional colours available in some ranges:

Designer RADIATORS

Designer Looks
Choose from our extensive range of designer options to suit your tastes

Add Some Colour
Many of our designs are available in multiple colour options to help you personalise your look

Designer radiators and towel rails provide so much more than heat – they're a chance to turn up the style in any room

Vertical, Horizontal or Compact
We have sizes and shapes to suit every space, from a compact en-suite to signature pieces suitable for any room

Heat Output
All radiators vary in heat output. We recommend you seek advice from your plumber on the BTU requirements for your living space. Look out for double panel radiators and the exceptional heat output for larger spaces

Radiator Valves

Designer Radiator and Heated Towel Rail FAQs

How much heat will I need?

All rooms are individual and therefore the heat output required from your selected radiator will vary. It is important that you choose the correct radiator to ensure that enough heat is generated to keep you comfortable. A sensible tip is to always choose a model with a higher heat output than you require, as this can always be controlled by turning them down.

What is the measurement for heat output?

All our radiators carry the heat output measured in either:

- BTUs (British Thermal Unit) or
- Watts

Our BTU calculations use the British Standards of Delta t50c and t60c.

What heat output will I need for my room?

It is highly recommended that your installer calculates the BTU requirement for each applicable room, so you can get the maximum heat benefit from your chosen radiator. We strongly suggest this is done before purchasing your radiator.

What radiator designs offer the best heat output?

Basically, the bigger surface area that a radiator has, the more heat output will be generated. Another general guide is that painted finishes offer a slightly better heat output than chrome-finished items. To optimize the space you have available, we offer radiator designs that can be fitted horizontally or vertically. To get additional heat output from the same area, you can also choose options that include multi rows of tubes, panels and columns.

Radiator colour options

From stock, we offer the most current fashionable colour options across a wide range of products.

Please note that owing to the printing process, the actual colours on the radiators may vary slightly from those shown in our brochure.

Pipe centres

All our dimensional details are published in our current brochure and on our website. However, owing to manufacturing tolerances, we strongly suggest that your final pipework position is not completed until you actually receive delivery of your radiator.

Electric-only radiators

Where your installation location does not have immediate access to an existing water supply, we can offer purpose-made electric-only products for a quick and easy solution to your heating needs. These electric-only products are supplied pre-filled with an electrical inhibitor solution, and fitted with a compatible heating element.

Dual-fuel radiators

Some of our radiators can also work as dual-fuel applications, which means that when your main heating system might be turned off in the summer months, you can still operate your radiators electrically if required. Please consult your plumber before purchasing heating elements.

Radiator valves options

Depending on your choice of radiator, we have several styles to choose from, details of which can be found on the left hand page.

Warning / precautions

Qualified persons should make all electrical and plumbing connections. When fitting radiators with heating elements, the radiator must always be mounted with the element at the bottom with the radiator in the upright position. Failure to do so may result in a fire hazard.

Designer Radiator and Heated Towel Rails

TECHNICAL INFO

- All radiators come complete with fixing screws.
- Prices exclude radiator valves and heating elements.
- After installing any new radiators, when refilling the system, it is recommended that a suitable inhibitor is used.
- All tappings are ½" BSP.
- Dimensions are subject to minor deviations.
- We recommend that pipework is not installed until receipt of heated towel rail.
